#### **4 First aid measures**

##### 4.1 Description of first aid measures

###### Inhalation:

Remove person from danger area.

Supply person with fresh air and consult doctor according to symptoms

If the person is unconscious, place in a stable side position and consult a doctor.

Respiratory arrest – Artificial respiration apparatus necessary.

###### Skin contact:

Wipe off residual product carefully with a soft, dry cloth.

Remove polluted, soaked clothing immediately, wash thoroughly with plenty of water and soap, in case of irritation of the skin (flare), consult a doctor.

Dab away with polyethylene glycol 400.

###### Eye contact:

Remove contact lenses.

Wash thoroughly for several minutes using copious water – call doctor immediately, have Data Sheet available.

###### Ingestion:

Rinse the mouth thoroughly with water.

Do not induce vomiting – give copious water to drink. Consult doctor immediately.

Never pour anything into the mouth of an unconscious person.

##### 4.2 Most important symptoms and effects, both acute and delayed

If applicable delayed symptoms and effects can be found in section 11 and the absorption route in section 4.1.

The following may occur:

Dermatitis (skin inflammation)

Drying of the skin

Allergic contact eczema

Discoloration of the skin

Irritant to mucosa of the nose and throat

Coughing

Headaches

Effect on the central nervous system

Asthmatic symptoms

In case of sensitivity, concentrations below the limit value may already result in asthmatic symptoms.

Respiratory distress

In certain cases, the symptoms of poisoning may only appear after an extended period/after several hours.

4.3 Indication of any immediate medical attention and special treatment needed

In case of irritation to the lungs, perform first-aid with controlled-dosage aerosol dexamethasone.

Pulmonary oedema prophylaxis

Medical supervision necessary due to possibility of delayed reaction.

## **6 Accidental release measures**

6.1 Personal precautions, protective equipment and emergency procedures

Ensure sufficient supply of air

Avoid inhalation and contact with eyes or skin

If applicable, caution – risk of slipping.

6.2 Environmental precautions:

If leakage occurs, dam up

Resolve leaks if this possible without risk

Prevent surface and ground-water infiltration, as well as ground penetration

Prevent from entering drainage system

If accidental entry into drainage system occurs, inform responsible authorities.

**6.3 Methods and material for containment and cleaning up:**

Soak up with absorbent material (e.g. universal binding agent, sand, diatomaceous earth, sawdust) and dispose of according to Section 13.

Allow to stand for a few days in an unclosed container until reaction no longer occurs.

Keep moist.

Do not close packing drum.

CO<sub>2</sub> formation in closed tanks causes pressure to rise.

## 8.2 Exposure controls

### 8.2.1 Appropriate engineering controls

Ensure good ventilation. This can be achieved by local suction or general air extraction.

If this is insufficient to maintain the concentration under the WEL or AGW values, suitable breathing protection should be worn.

Applies only if maximum permissible exposure values are listed here.

### 8.2.2 Individual protection measures, such as personal protective equipment

General hygiene measures for the handling of chemicals are applicable.

Wash hands before breaks and at end of work.

Keep away from food, drink and animal feedingstuffs.

Remove contaminated clothing and protective equipment before entering areas in which food is consumed.

Eye/face protection:

Tight fitting protective goggles with side protection (EN 166).

Skin protection – Hand protection:

Chemical resistant protective gloves (EN 374)

Recommended

Protective nitrile gloves (EN 374)

Minimum layer thickness in mm: <=0,35

Permeation time (penetration time) in minutes >= 480 minutes

The breakthrough times determined in accordance with EN 374 Part III were not obtained under practical conditions.

The recommended maximum wearing time is 50 % of breakthrough time.

Protective hand cream recommended.

Skin protection – Other

Protective working garments (e.g. safety shoes EN ISO 20345, long-sleeved protective working garments)

Respiratory protection:

Normally not necessary

If OES or MEL is exceeded

Filter A2 P2 (EN 14387), code colour brown, white

Observe wearing time limitations for respiratory protection equipment

Thermal hazards:

Not applicable

Additional information on hand protection – No tests have been performed

In the case of mixtures, the selection has been made according to the knowledge available and the information about the contents.

Selection of materials derived from glove manufacturer's indications.

Final selection of glove material must be made taking the breakthrough times, permeation rates and varies from manufacturer to manufacturer.

Selection of a suitable glove depends not only on the material but also on other quality characteristics and varies from manufacturer to manufacturer.

In the case of mixtures, the resistance of glove materials cannot be predicted and must therefore be tested before use.

The exact breakthrough time of the glove material can be requested from the protective glove manufacturer and must be observed.
